Professional Summary

Software Engineer specializing in back-end engineering, with 5+ years of experience building scalable, production-grade systems across **B2B**, **B2C**, and **B2B2C** products. Ranked in the **top 3%** of **LeetCode** contest participants. Experienced in building **AI-agent** integrations using the **Model Context Protocol (MCP)**, including internal MCP servers that expose production APIs to AI agents.

Skills

Languages & Frameworks: C++, Python (Flask), Java (Spring Boot), PHP (Laravel), JavaScript (Node.js)
Databases: PostgreSQL, MySQL, MongoDB
DevOps & Cloud: Docker, Docker Compose, Nginx, AWS, Jenkins, ArgoCD, Supabase
Tools & Technologies: Git, GitHub, RabbitMQ, Celery, RESTful APIs, Microservices Architecture
AI/Agents: MCP (Model Context Protocol), AI-assisted automation
CS Fundamentals: Data Structures, Algorithms, Object-Oriented Programming (OOP), Design Patterns

Experience

Back-End Engineer @ Settle | **a B2B fintech payments platform (microservices architecture)** **Sep 2023 - Present**

- Developed and maintained a microservices-based peer-to-peer payment system that automates the accounting cycle process, enabling clients to pay customers with a single click
- Designed and implemented RESTful APIs using Flask/Python for seamless data processing and system integration
- Built an internal MCP (Model Context Protocol) server exposing the company's core APIs to AI agents, enabling automated end-to-end onboarding of new organizations, including organization and admin creation, user provisioning by email, initial configuration and seed data setup, and on-demand statistics retrieval
- Integrated the platform with multiple ERP systems, including Oracle E-Business Suite (EBS) and Oracle Fusion, to synchronize financial and transactional data
- Own the deployment and infrastructure for containerized backend, front-end, and scheduled cron-job services on an on-premises VM in a private, network-restricted environment, using Docker Compose for orchestration, Nginx as a reverse proxy, and firewall/proxy configuration to enable secure external API connectivity
- Reviewed pull requests from peer engineers, providing feedback on code quality, design patterns, and best practices
- Implemented performance optimizations, improving system response time and code maintainability
- **Stack**: Python (Flask), JavaScript (Node.js), PostgreSQL, RabbitMQ, Celery, Docker, Nginx, AWS, Jenkins, ArgoCD, Supabase, Microservices Architecture, MCP

Session Lead – Fundamentals of Programming @ Udacity | **Part time** **Oct 2024 - Oct 2025**

- Led interactive programming sessions covering data types, control structures, functions, and object-oriented programming
- Guided students through hands-on coding exercises and projects, achieving high student satisfaction ratings
- Reviewed code submissions and provided constructive feedback to reinforce clean coding practices and problem-solving techniques

Back-End Engineer @ Eden | **a B2B2C smart-city solutions provider (microservices architecture)** **Dec 2022 - Sep 2023**

- Developed and maintained a car parking management system deployed across smart villages in Saudi Arabia
- Designed back-end services and database architecture to handle parking transactions and real-time monitoring
- Implemented dynamic pricing and real-time occupancy updates to enhance system functionality and user experience
- Built an analytics dashboard consuming feeds from the data team, collaborating cross-functionally to define and agree on data formats and contracts between the two teams
- **Stack**: Java (Spring Boot), JavaScript (Node.js), PostgreSQL, MongoDB, RabbitMQ

Front-End Engineer @ Egyptian Armed Forces (National Service) | **B2G** **Nov 2021 - Dec 2022**

- Developed and maintained front-end modules for a comprehensive ERP system focusing on scalability and usability
- Collaborated with back-end teams to integrate APIs and reduce data synchronization errors
- **Stack**: React, JavaScript

Full-Stack Engineer @ NajahNow | **a B2C edtech platform** | **Part time** **Jun 2020 - Mar 2021**

- Developed an online educational platform that provided critical remote learning solutions during the COVID-19 pandemic
- Built full-stack features including secure authentication, course management, and student dashboards
- Launched payment gateway integration and real-time quizzes to enhance student engagement and learning experience
- **Stack**: PHP/Laravel, Blade Templates, JavaScript, HTML, CSS, MySQL

Achievements

- Passed **Google Software Engineer L3** advanced interview process and progressed to the team matching phase (2026)
- Ranked in the **top 3%** of **LeetCode** contest participants, with **1,700+** problems solved

Education

Bachelor of Engineering, Software Engineering, Cairo University **Sep 2016 - Jul 2021**

Overall grade: Very Good | Graduation project grade: Excellent
